

A 3D visualization of a segmented vertebra, showing the principal axes of inertia. The vertebra is rendered in a light blue, semi-transparent mesh. Two red lines originate from the center of mass, extending along the principal axes of inertia. A small blue and yellow coordinate system is visible in the bottom left corner.

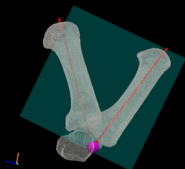

A 3D visualization of a segmented bone structure, likely a pelvis, rendered in a light blue/white mesh. A green plane is positioned below the bone, and two red lines intersect at a point on the plane, possibly indicating a registration or alignment process.
